INTRANET PORTAL

FOR

EDUCATIONAL

INSTITUTES

MBI Solutions, LLC

www.mbisolutions.net

SUMMARY

Time to change the age-old belief that an education portal is only good for disseminating information and storing digital teaching aids. MBI's intranet portal for education segment now offer a broader range of integrated tools that will let your school or university to share knowledge, facilitate collaboration and stay connected with pupils, parents, and colleagues. Our intranet portal helps your school or university to operate efficient, scalable, smarter, and faster.

"

We help organizations to digitize their operations by utilizing our integrated tools from document search to community build-up within the university / campus. Our solution allows users to access relevant work-related information at on place based on the user level and rights. "

Key Productive Modules

Staff Directory

It provides each member a own profile and information on current projects / handling subjects. It also helps individuals to connect and view the content that is published. It helps to target communication and information to the respective user group.

Community Portal / Activity Hub

Users can share the content and build a connection with students, parents, and faculty. Users can also view the published post by faculty and to see what other members / users are talking about in real-time and allow others to share their opinion / thoughts on the shared content.

Task Management

Faculty can group the students for group projects, map assignments, check progress and track deadlines. Allows faculty track of all the actions that are taken during the group activities.

Intelligent Grouping

Users can manually map and group fields that are required while uploading the document / files into portal's directory. Documents / files will be automatically grouped and mapped with respective repository.

Role Based User Access

Allows internal / external audience to access the work-related documents / links / forms based on the user level and allow audience to view and access the agency communication section irrespective of the user level.
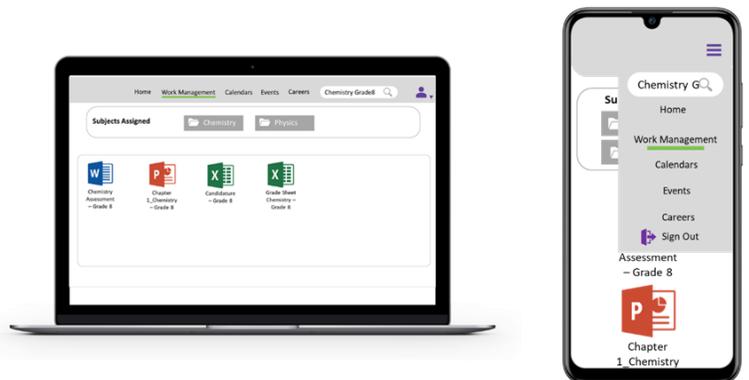

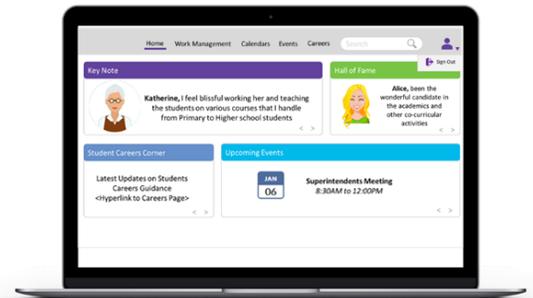

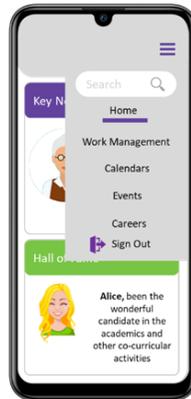

Preemptive Search

gives freedom of access to the staff to search for the documents by the title, relevant tags, or the content keyword. This negates the staff's dependence on old school paper systems and/or email to search what they need. All internal information and data are held in one central cloud location.

Careers Guidance

Admins / respective user group can post career opportunities and guide / train students in the career growth and facilitating them in soft-skills development by providing articles, video tutorials etc.

Activity Feeds & Notifications

Allows you to promote school activities and share important announcements and provide real-time notifications to the users on the upcoming events.
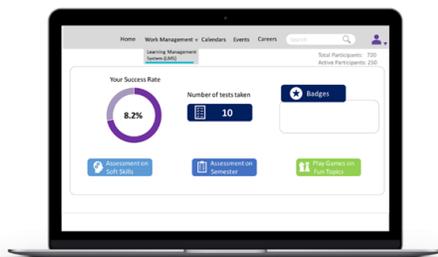

Calendar Scheduling

Internal Audience / faculty can schedule the event, meetings right from the intranet portal by adding the required audiences. Once the meeting is scheduled, an automatic reminder notification will be sent to the respective user group

Learning Management System

Allow students to take assessment on daily basis and can track their performance and results on the subject areas, a gamification module that provides badges based on the overall success rate.

Security

The security and privacy of staff/students is given the highest priority with the very latest internet security features including 2-way SSL encrypted connections, restricted access to information through site permissions and secure folders and files. Parents and students alike can be confident that their personal data is as secured.
